

a Method × task performance landscape (response-direction Pearson-Δ)

17 methods over 47 evaluations; columns are the units each evaluation averages over. Blue beats the binding floor on that column, orange falls below it. Four point estimates clear both floor members at the split level. Only the donor contrast retains support in the final 24-comparison family (solid ring). Dashed rings mark borderline FP-ridge and two exploratory Kang results, positive in 4 of 8 lineages (Wilcoxon $p = 0.55$ and 1.00). The unseen-perturbation block has none.

b CellOT improves donor transfer in Sostic
