cell fill = margin over that column's binding floor (Pearson-Δ)

— .43 .00 +.13

blue = above the floor; white = at the floor; orange = below it

★ clears both floor members and survives multiplicity correction

★ point-estimate clearance, without statistical support

□ adapted interface □ diagnostic comparator □ not evaluated

row accent: ■ baseline ■ conditioned ■ diagnostic comparators

93 of 106 donors
over the cell-mean floor
mean gap +0.107 [+0.086, +0.128]
paired Wilcoxon $p = 1.6 \times 10^{-13}$
mean +0.107

(Pearson- Δ)
